

Supplier of
solutions for special air diffusion systems

Safety and Exclusivity

Strulik a supplier of solutions for special air diffusion systems

Since 35 years Strulik has worked as a supplier of air diffusion systems for special requirements and applications. Strulik does not supply a product only, but it also offers an optimized solution in cooperation with design engineers and architects from the first stage of planning until the commissioning of a system.

This Strulik philosophy is called:
Design Assistance and Supply Service.

Over recent decades the following fields of work have become the core areas where Strulik has collected extensive experience:

- **Airports**
- **Clean rooms**
- **Tailor made design products for: listed buildings, churches, theatres, opera houses, museums and hotels**
- **Indoor shooting ranges.**

Division „Airports“

*Airport London Gatwick, England
Design, construction and manufacture of elliptical displacement diffusers*

Displacement systems in airports have become more important because of energy savings and the high air quality. There are a lot of possibilities for integrating different types of displacement diffusers into the airport design.

They can be installed as wall or floor diffusers, as free standing or column diffusers. Also the installation into counters or escalators is possible.

*Plinth diffuser integrated in the front of counters. Front face built of shock proof stainless steel LSE material.
Stuttgart Airport, Terminal 3, Germany*
